

WATERPROOFING MEMBRANES

APPLICATION METHOD

- ① Treat the area to be waterproofed with bituminous primer (POLYPRIMER HP 45 Professional).
- ② Position the "Bordangolo" near the horizontal-vertical joint.
- ③ Completely strip away the product identification tape.
- ④ In the colder months, we recommend heating up the roll of membrane before applying it.
- ⑤ Position and apply the sheet by flaming its bottom surface.
- ⑥ Pull the sheet up to a certain height against vertical surfaces.
- ⑦ Apply the second sheet with adequate overlapping.
- ⑧ Lay the second layer by overlapping. Do not cross the sheets.
- ⑨ Roll the overlapping areas using the special pressing roller.
- ⑩ Example of internal corner.
- ⑪ Example of external corner.
- ⑫ Example of vent pipe.

TECHNICAL DESCRIPTION

POLYVAP Radonshield is a plastomeric waterproofing membrane formulated for special applications (such as vapour and/or radon gas barrier). The distilled bitumen-based compound modified with POLYPROPYLENE is reinforced with a 6/100 thickness aluminium strip bonded to reinforced glass fibre. The special type of compound ensures the membrane remarkable characteristics of low temperature flexibility. The sophisticated technology with which the membrane is made guarantees the product's quality.

POLYVAP Radonshield is indicated wherever high relative humidity values are present and is primarily applied beneath layers of insulation material in order to maintain their durability. As a **radon gas barrier**, **POLYVAP Radonshield** is applied to foundations or embankment walls.

APPLICATION: INSTRUCTIONS AND RECOMMENDATIONS

POLYVAP Radonshield can be provided with its upperside covered with a talc, sand, or a non woven polypropylene fabric. Its underside is protected and faced with **POLYFLAM EasyTorch** (reduced printed area increases product adhesion), the special non-stick polyethylene film to be flamed during laying. Support surfaces must be dry, clean, and sufficiently smooth and level. Application is made by light flaming with propane gas. Laying is quick and easy..

STOCKING

Keep the products packed in the carton box in a dry place, away from direct sunlight. Do not place the pallets, one on top of another and the rolls must always be stocked in a vertical position. The contact with solvents and organic liquids may damage the product. Avoid application if the temperature is excessively low or high, avoid stamping (shoes with crampons, small objects or sharp edges). For further information contact Polyglass SpA Technical Office.

Keep out of direct sunlight.

Avoid stocking pallets without evenly distributing the load.

Keep the rolls standing.

Absolutely avoid puncturing the product.
